## SUMMARY

Cybersecurity student with hands-on experience in virtualization, network configuration, and system troubleshooting across Windows, Linux, and Kali. Completed the CompTIA A+ course and building a self-hosted homelab with Proxmox, TrueNAS, and VLAN-segmented networking. Seeking opportunities to apply technical skills to real-world IT and security challenges.

## TECHNICAL SKILLS

**Operating Systems:** Windows 10/11, Windows Server (basic), Linux (Ubuntu), Kali Linux
**Virtualization:** Proxmox VE, VMware Workstation, VMware Fusion, VirtualBox, Snapshot Management, VM Networking
**Networking:** TCP/IP, DHCP, DNS, Subnetting, VLANs, NAT, Firewalls, VPN Fundamentals, Pi-hole, Extreme Networks Switching
**Security:** Kali Linux Tools, Network Scanning, Vulnerability Analysis, Password Cracking Basics, Hardening, SIEM Fundamentals
**Hardware & Tools:** PC Building, Component Diagnostics, TrueNAS, Jellyfin, PowerShell & Bash (basic), Git/GitHub, Ticketing Systems

## PROJECTS

**Self-Hosted Homelab Infrastructure** **Mar 2026 – Present**
*Systems Administration & Networking* *Proxmox VE, TrueNAS, Pi-hole, Jellyfin, Extreme Networks*

- Built a multi-node homelab with a Proxmox VE hypervisor, TrueNAS storage server, and mini PC media server.
- Configured VLANs on an Extreme Networks switch to segment network traffic and isolate systems for security.
- Deployed TrueNAS for centralized storage, serving the media library to clients through Jellyfin on separate hardware.
- Deployed Pi-hole on a Raspberry Pi for DNS filtering and host Proxmox VMs for cybersecurity labs and testing.

**Network Services Configuration & Analysis** **Jan 2025 – Apr 2025**
*Networking Fundamentals* *DNS, DHCP, Wireshark, nmap*

- Configured DNS, DHCP, and static IP assignments to understand how core network services interact.
- Analyzed packet flows in Wireshark and used nmap to identify open, closed, and filtered ports.

**Systems Troubleshooting & Hardware Diagnostics** **2022 – 2025**
*IT Support & PC Systems* *Windows, Linux, Hardware Components*

- Built and configured a desktop system (i7, 32GB RAM, 3090 Ti) validating component performance and stability.
- Resolved driver, virtualization, and network configuration issues across Windows and Linux.

## EXPERIENCE

**IT Intern** **May 2025 – Jul 2025**
*Chester City Hall, IT Department* *Chester, PA*

- Configured and deployed a Cisco Meraki switch to build a sandbox for testing an internal phone service before rollout.
- Resolved user support tickets, including an Adobe licensing/access issue, and kept documentation up to date.
- Organized the server room to prepare space for additional server and networking equipment.
- Produced a construction time-lapse video for City Hall's website showcasing progress on the new building.

**Summer Intern** **June 2024 – Aug 2024**
*Monroe Energy, LLC* *Marcus Hook, PA*

- Conducted inventory audits and maintained accurate material records using Excel and Maximo.
- Identified workflow inefficiencies and worked with the team to improve inventory tracking processes.

## EDUCATION

**Penn State University** **Aug 2023 – Present**
*B.S. in Cybersecurity Analytics and Operations* *University Park, PA*

- Relevant Coursework: Networking and Telecommunications, Cybersecurity Analytics, System Administration Essentials, Information Sciences and Technology, Programming Fundamentals

## CERTIFICATIONS

- CompTIA A+ (Coursework Completed) | CompTIA Security+ (In Progress) | Cisco CCNA (In Progress)
